

COMPONENTS IN ACTION

How every piece of software works

Functional tests:

🌀 OBSERVING ANOMALIES 🌀

Implies the source code is not being studied

Functional usually means Dynamic

We don't need a software expert. Less technical profile

PROCESS

Identification of functionality that the software performs

Definition of input data based on the functionality

Determination of output based on the functionality

Execution of the test cases

Comparison of actual and expected outputs to obtain anomalies

**STRUCTURAL AND FUNCTIONAL ARE
COMPLEMENTARY TECHNIQUES**
